Steps to Change GitHub Account in VS Code

1 Sign Out from GitHub in VS Code

- Open VS Code.
- Click on the **Accounts** icon (top-right).
- Under GitHub, click **Sign Out** and close VS Code.

2 Remove Old GitHub Credentials from Windows

- Open **Credential Manager** (Win + S → Search).
- Go to **Windows Credentials** → Find GitHub-related entries.
- Click **Remove** to delete them.

3 Update Global Git Config (If Needed)

- Check current user: git config --global --list
- If needed, reset old details:
  git config --global --unset user.name
  git config --global --unset user.email
- Set new GitHub account:
  git config --global user.name "NewGitHubUsername"
  git config --global user.email "NewEmail@example.com"

- Verify: git config --global --list

4 Log In with New GitHub Account in VS Code

- Open VS Code.
- Click **Accounts** → **Sign In with GitHub**.
- Follow authentication steps in the browser.

5 Update GitHub Remote Repository (If Needed)

- Check the current remote: git remote -v
- If needed, update it:
  cpp
  CopyEdit
  git remote set-url origin https://github.com/NEW_USERNAME/NEW_REPO.git
- Verify: git remote -v

6️⃣ Test Everything

- Create and commit a test file:
  ```
  echo "GitHub Account Changed!" > test.txt
  git add .
  git commit -m "Testing new GitHub account"
  git push origin main
  ```

✅ Done! 🎉
